

SeeCells

A digital microscope for young amateur scientists, that turns the camera on your phone into a powerful microscope, to record and share exciting close-up images of the world around us.

Discover cool worlds hidden to the human eye!

SeeCells' revolutionary software allows a young user to take images with a regular phone camera at 400X magnification. Images and stories can be stored, then uploaded to the SeeCells Gallery to share with a growing community of young scientists.
